

Boise State University Summer 2024 Funding Opportunity

Boise State University and Idaho College of Osteopathic Medicine (ICOM) are excited to announce another year of a collaborative summer research internship program that will provide funding for supplies for research with a rising 2nd year osteopathic medical student. ICOM medical students will participate in a new or ongoing mentored research project with Boise State faculty and will gain valuable experiences through hands-on training that can be applied to their medical education and real-world challenges. A Boise State research lab can receive \$1,500 in funding per ICOM student for equipment, materials, and supplies. ICOM students are expected to receive up to eight weeks of part-time or five weeks of full-time research training, preferably beginning before the end of May ending before the end of July; dates are flexible. Participating labs and projects at Boise State University will be selected after review of the application materials by ICOM based on relevance of research opportunities for student doctors, the degree of mentoring that can be provided, and the purpose of the funding. Selected labs/projects will be paired with ICOM students interested in research. Many ICOM students already have graduate degrees and previous research experience, and you can expect them to be bright, ambitious, and hard-working. Boise State faculty can request ICOM students based on their qualifications and background. If interested, please write a *brief (1/2 page) description of a project available for an internship, the mentoring that can be provided, skills the student doctors will gain, and the need for funding.*

- Eligibility: Principal Investigator at Boise State University interested in including a highly qualified ICOM student in a mentored summer research project (either new or ongoing)
- Funding available: \$1,500 for equipment, materials, and supplies
- Parking will also be provided for the ICOM student
- Duration: flexible start/end dates. 8 weeks, part-time OR 5 weeks, full-time. Preferred full-time window: early June to mid-late July
- Application: Please submit a brief (1/2 page) description of an available internship opportunity that describes the relevance of the proposed project, mentoring and skills that can be acquired by the ICOM student during the project, and the need for funding.
- **Deadline: Monday, March 18th, 2024**, to submit description of internship opportunity for priority consideration
- **Submission:** cjorcyk@boisestate.edu Cheryl Jorcyk (Boise State University) 208-426-4287
