Note on samples: The maximum sample dimension that can be introduced into the XPS system is a 2" disc with a height of 7 mm. Samples taller than 7 mm cannot pass into the XPS. The analysis chamber is maintained at ultrahigh vacuum levels with a base pressure of about  $5 \times 10^{-10}$  Torr, so samples must have a low enough vapor pressure as to not compromise the vacuum integrity.

Experimental goal:

Sample description:

Acknowledgments:

In manuscripts and presentations that uses this XPS data/results, please acknowledge NSF-MRI grant DMR-0722699.
